

Coir

best for
consistently
superior
growth

Classic Coir

Besgrow Classic Coir is a high quality, versatile growing substrate produced from the pith of coconut husks. Classic Coir's fine grade makes it ideal for strawberries as well as a variety vegetable and flower crops. It's an excellent additive for potting mixes, as its high water holding capacity promotes rapid root and foliage growth.

GROWING VERSATILITY

Classic Coir is a 100% natural, organic material that is supplied in a dried, compressed form. It is simple and easy to re-hydrate. Classic Coir is suitable for both home growers and large commercial horticulturists. Its excellent water holding and re-wetting properties makes Classic Coir ideal for plants that require higher levels of hydration.

Classic Coir binds well when mixed with other media, distributing the benefits of coir throughout the entire growing substrate, for optimum results.

DESIGNED FOR SUPERIOR RESULTS

Comprehensive quality control systems ensure a consistently high quality product that will help you achieve superior growing results.

Classic Coir is supplied in a range of bulk and Gropac sizes. We are able to customise Gropacs to your specific growing needs. Gropacs consist of compressed coir wrapped in UV treated plastic with holes cut for planting and drainage.

NATURALLY SUSTAINABLE & RENEWABLE

All Besgrow Coir products are produced from sustainable and renewable resources. The well planned cultivation and maintenance of Sri Lanka's coconut plantations ensures future sustainability.

CHARACTERISTICS	USAGE	TECHNICAL	PACKS
<ul style="list-style-type: none"> • 100% natural, organic and renewable resource • Highly versatile, for all types of growth applications • High water holding capacity and high CEC • Consistent structure allows for even water distribution • Very stable physical structure • Produced to Dutch RHP standards for growing media 	<ul style="list-style-type: none"> • Stand-alone growing substrate for greenhouses and hydroponics • Soil conditioner • Additive for potting mixes • Home growers • Commercial growers 	<ul style="list-style-type: none"> • pH 5.5 – 6.0 • EC (mS/cm) 0.6 – 1.2 • Air / Water Ratio at 7cm 20% / 80% • 16 Litre/kg wet volume • Moisture <20% 	<ul style="list-style-type: none"> • 4.5 kg bales • 650gm Briquettes (9L when rehydrated) • A wide variety of Gropac sizes are available • Gropacs can be made to measure with pre-cut drain slits and planting holes
